

SUSTAINABILITY PROJECT

Our Commitment to a Better Future

Opac S.r.l. reaffirms its commitment to contribute to a better future for generations to come. For this reason, it defines and implements targeted policies and promotes improvement projects aimed at enhancing the environmental sustainability of its operations.

This commitment aligns with the overarching framework of commitments outlined by the United Nations, which is rooted in the following sustainable development objectives:

Building upon this framework, Opac has evaluated how it can positively impact these aspects through its present and future decisions, establishing the structural foundation upon which to chart its path towards improvement.

For each of these objectives, the company has delineated the specific areas within which activities related to these issues are conducted, as well as the methods of implementation through which the company can actively contribute to achieving the set goals.

Opac is confident in its ability to contribute to the attainment of these defined objectives through the adoption of a business sustainability policy centered on core implementation principles of environment, safety, ethics, and human rights.

In alignment with the overarching objectives of its sustainability policy, specific policies are delineated for various facets contributing to enhancing the business's sustainability.

The attainment of each policy's objectives is overseen through a structured improvement plan, routinely monitored by company management. The effectiveness of implemented actions is evaluated using measurable indicators, subject to regular review.
